

bag to said [the] breastpump, said opening being sealed by a releasable closure, and

an adapter collar member having an opening defined therein through which adapter collar member opening said bag is received with material of said bag surrounding said bag opening being spread apart to overly said adapter collar member adjacent said adapter collar member opening,

[the breastpump further including a breastpump collar for attachment of] said adapter collar member further being adapted for attachment to said breastpump collar whereby when said adapter collar member is attached to said breastpump collar with said bag positioned in said adapter collar member opening in said overlying fashion [, thereto with said material of] said bag [being] is fixed between said breastpump collar and said adapter collar member for passage of milk through said [the] breastpump and into said bag through said bag opening.

4. (Amended) A bag for attachment to a breastmilk pump for containing breastmilk, comprising:

a liquid containing portion and a writing area,  
an opening provided in said liquid containing portion for attachment of the bag to a breastmilk pump, said writing area being formed integral with said bag and spaced from said opening and having a writing surface and further being isolated from said liquid containing portion of said bag whereby when milk is expressed into said liquid containing portion of said bag said integral writing area remains free of milk beneath said writing surface.

8. (Amended) A bag for attachment to a breastmilk pump for containing breastmilk, comprising:

a thermoplastic film front sheet and a thermoplastic film back sheet, said front and back sheets being joined by a first seal, said first seal being a permanent seal and defining a liquid containing portion,

a writing area formed integral with said bag by said first seal joining said front and back sheets in facial engagement to define said writing area, and further being isolated from said liquid containing portion and spaced from an opening defined in said bag through which milk is introduced into said liquid containing portion whereby, when milk is expressed into said liquid containing portion of said bag, said integral writing area remains free of milk therebelow, and

a pour spout formed integral with said bag and defined by said first seal, said pour spout being separate from an opening defined by said front and back sheets which opening is used for attachment of said bag to the breastpump.

12. (Amended) A bag for attachment to a breastmilk pump for containing breastmilk, comprising:

a plastic film front sheet and a plastic film back sheet, said front and back sheets being joined by a first seal line, said first seal line being a permanent seal and defining a liquid containing portion,

a second seal line joining said front and back sheets, said second seal line being releasable and defining an opening in said liquid containing portion for attachment of said bag to the breastmilk pump, said second seal line being peeled apart to form said opening, and

a writing area formed integral with said bag by said first seal line joining said front and back sheets in facial engagement to define said writing area, and further being

isolated from said liquid containing portion whereby when milk is expressed into said liquid containing portion of said bag said integral writing area remains free of milk therebelow.

16. (Amended) A milk collecting device having a disposable container [for use with a breastpump], comprising:

a breastpump comprising a hood body,

a thermoplastic bag for containing milk therein, said bag having a releasable seal defining an opening for use in attaching said bag to said [the] breastpump, and a permanent seal defining a writing area formed integral with said bag which writing area is isolated from [said] milk contained within said bag and free of milk therebelow, said permanent seal further defining a pour spout formed integral with said bag but separate from said bag opening,

an adapter collar member having an opening defined therein through which adapter collar member opening said bag is received with part of said bag surrounding said bag opening being spread apart in overlying fashion with respect to said adapter collar opening,

said [the] breastpump further including a breastpump collar for attachment of said adapter collar member thereto with said part of said bag surrounding said bag opening being fixed between said breastpump collar and said adapter collar member for passage of milk through said [the] breastpump and into said bag through said opening, and

a tie for use in closing said bag opening, said bag material having a pair of holes defined therein adjacent said bag opening and on opposite sides of said bag opening through which holes said tie is received.
